High-density development misplaced

The proposed 408-lot subdivision located at Cottonwood and Kendall roads, far away from any amenities, and with minimum road access to downtown, will create at least 4,000 car trips daily.

This will lead to major congestion especially around Walla Walla High School and Prospect Point Elementary School, but also this traffic will have an effect on all the major intersections on the southside of town.

High-density development needs to be in the downtown core where amenities are available or to the north where the freeway is readily accessible to handle the traffic.
